

Aftercut

PATCH FIX

Aftercut Patch Fix is a unique blend of grass seed, feed and seeding soil designed to fix patches in your lawn quickly and easily.

TARGETING PET URINE PATCHES

Patch Fix contains a special ingredient which absorbs the harmful salts and ammonia produced when pet urine breaks down, helping grass to re-establish where it would otherwise fail. Even better, Patch Fix also contains pet urine resistant grass seed varieties.

WHERE CAN I USE PATCH FIX?

Perfect for repairing all patches:

- In high-traffic areas where the lawn is worn away
- In patches caused by pet urine damage
- Shady conditions, such as under trees
- In and around children's play areas, such as trampolines

HOW TO USE

To Fix a Patch:

- Remove all dead grass, weeds and their roots.
- Lightly rake the soil to prepare the patch, breaking up any hard lumps or compacted soil surfaces.
- Shake the box to mix up the ingredients.
- Apply Aftercut Patch Fix to the patch to 2mm depth.
- Water with a fine spray to moisten the mixture and activate the seed.
- You can apply slightly less when covering thin grass rather than a bare patch.
- Use anytime from early spring to late autumn.

Rate of application *2.4kg pack will treat over 30 patches of 45 cm diameter using approximately 75g per patch.

AFTERCARE

For best results:

- Once the new grass has grown to about 7-8 cm tall, mow for the first time.
- Do not remove more than 30% of the grass height in one mowing.
- Continue watering young grass throughout the first year of establishment, to ensure best results.

GENERAL ADVICE

- Children and pets need not be excluded from treated areas.
- Store in a cool, frost-free place away from children, pets and foodstuffs.
- Use contents within season of purchase.
- Contents may settle in transit.

Applying a little more product to the surrounding lawn will help patches blend in with the existing grass better.
