**INSTRUCTIONS FOR USE**

**Where to Use**  
Resolva Bug Killer Ready To Use controls aphids (greenfly and blackfly), beetles, bugs (lygus), blossom weevils, capsids, caterpillars, cutworms, cabbage stem weevil, clay-coloured weevil, carrot fly, leaf-curling midges, leaf beetles (including rosemary beetle and lily beetle), pea midge, pea moth, pea and bean weevil, sawflies, scale insects, thrips and whitefly. Resolva Bug Killer Ready To Use also gives a reduction in the numbers of mealybugs. For details on what crops Resolva Bug Killer Ready To Use can be used on see the table opposite.

**When to use**  
Resolva Bug Killer Ready To Use can be used all year-round. For pea moth where there is a history of damage from this pest, apply during flowering. For carrot fly apply to control adult flies after emergence and before eggs are laid. For further information on timing visit [www.gardenhealth.com](http://www.gardenhealth.com). For whiteflies, scale insects, mealybugs and thrips repeat applications may be required; 1-2 applications should be made at intervals of 7-21 days. Do not use more than 2 applications per infestation or per crop.

**How to use**  
Not known to be hazardous to plants. No sensitive species or varieties are known. For best results treat when infestation or symptoms are first seen. For best results spray plants during late afternoon or early evening. Avoid spraying in direct sunlight or when plants are under stress e.g. from drought, frost, heat or over watering. Before treating exotic plants or large areas of the same plant species, undertake a test for damage on one plant and observe for effects over a 10-day period.

- Shake well before use
- Rotate the spray adjuster to 'spray' position
- Aim carefully at the plant to be treated and pump the trigger
- Spray both upper and lower surfaces of plant leaves lightly until fully wetted but avoid run-off
- Rotate spray adjuster to 'x' position after use and before storage.

**For the following pests use these spray volumes;**  
Whitefly 300ml – 666ml per 10 sq.m; Carrot Fly 1000ml per 10 sq.m.  
For all other pests use 300ml – 500ml per 10 sq.m

Not recommended for control of whitefly on cucumbers and courgettes.  
Pesticide resistance in glasshouse whitefly and some aphids is widespread.  
Where resistant pests are present this product is unlikely to give control. May cause tingling/numbness (paraesthesia) if exposed areas are contacted. The effect is transient and may last up to 24 hours.
