## RAT & MOUSE KILLER

### FOR USE AS A RODENTICIDE ONLY

A ready to use grain bait anticoagulant rodenticide, for the effective control of mouse and rat indoors and outdoors (around buildings), for use by non-professionals only.

#### HOW TO USE:

Rats	Low Infestation	Place 200g of product (4 x sachets) in a bait station. Distance between tamper resistant bait stations : 8 to 10 meters
	High Infestation	Place 200g of product (4 x sachets) in a bait station. Distance between tamper resistant bait stations : 4 to 5 meters
Mice	Low Infestation	Place 50g of product (1 x sachet) in a bait station. Distance between tamper resistant bait stations : 2 to 3 meters
	High Infestation	Place 50g of product (1 x sachet) in a bait station. Distance between tamper resistant bait stations : 1 to 1.5 meters

This product can be used to refill Deadfast Rat Killer Bait station.

#### Wash hands and exposed skin before meals and after use.

For use only in areas that are inaccessible to infants, children, companion animals and non-target animals. Prevent access to bait by children, birds and non-target animals (particularly dogs, cats, pigs and poultry). Wherever possible, secure baits so that they cannot be dragged away.

Unless under the supervision of a pest control operator, or other competent person, do not use anticoagulant rodenticides as permanent baits. In most cases, anticoagulant bait should have achieved control within 35 days. Search for and remove dead rodents at frequent intervals during treatment, at least as often as when baits are checked and/or replenished. Daily inspection may be required in some cases.

**PUBLIC AREA USE:** When the product is being used in public areas, the treated areas must be marked during the treatment period, and a notice explaining the risk of primary or secondary poisoning by the anticoagulant, as well as indicating the first measures to be taken in case of poisoning must be made available alongside the baits. Where tamper resistant bait stations are used, they should be clearly marked to show that they contain rodenticides and that they should not be disturbed.

Antidote vitamin K1 (under medical supervision). UK medical professionals should contact the National Poisons Information Service ([www.npis.org](http://www.npis.org)) for further advice.

**STORAGE:** Store in the original container in a dry and well-ventilated place. Keep away from sun radiation and other heat sources. Protect against frost. This product is stable for 45 months.

## RAT & MOUSE KILLER

**EMERGENCY MEASURES:** Bromadiolone is an anticoagulant which may produce bleeding; the onset of bleeding may be delayed for several days after exposure. If there is no active bleeding, the INR (prothrombin time) should be measured on presentation and 48-72 hours after exposure. If the INR is >4, administer Vitamin K1 (phytomenadione) 5-10mg by slow intravenous injection (100µg/kg body weight for a child). Treatment with phytomenadione (orally or intravenously) may be required for several weeks. The advice of the National Poisons Information Service (<http://www.npis.org/>) should be sought, particularly if active bleeding occurs.

**DISPOSAL:** Remove all baits after treatment and dispose of them in accordance with local requirements. Dead rodents and bait found outside bait stations should be disposed of using protective gloves. In the UK, waste bait should be double-bagged using plastic bags and disposed of in a household waste bin with a secure lid to prevent access of wildlife or pets or taken to a civic amenity site. For information on civic amenity sites contact the local authority.
