Why use Westland Plant Protection Bark?

Not only does this unique mulch create a physical barrier against slugs but the attractive, 8-20mm* mini bark chips provide a highly decorative finish for borders and containers. These small brown chips provide a clean background for displaying your plants against but also offers excellent weed suppression, moisture retention and thermal protection for plant roots.

Perfect for creating low maintenance borders and using in containers, Westland Plant Protection Bark reduces the need for frequent weeding and the amount of time spent on weeding.

Westland Plant Protection Bark is produced from sustainable conifer plantations which are grown for the timber industry and are certified by the Forestry Stewardship Council (FSC).

For use on existing small borders

Prepare the area by removing all weeds and debris. Spread a layer of bark 2.5-5cm deep over the area ensuring that the mulch reaches under the plant canopy and covers the root area.

For use on new small borders

Prepare the area by removing all weeds and debris. Spread a layer of bark 2.5-5 cm deep over the area.

For use in containers & pots

When planting containers & pots, leave a 5-7 cm space at top of the container or pot. Spread a 3-5 cm layer of bark over the top of the compost or soil. This will provide important thermal insulation, prevent water loss and make the pots easier to water.

Top tip:

For best results, laying a perforated plastic or fabric membrane under the bark mulch is advisable to further reduce weed problems where perennial weeds occur.

Aftercare for small borders

Remove any annual weeds as they appear. To maintain a good mulch layer replenish the area with fresh bark annually.

After care for containers & pots

Remove any annual weeds as they appear. Check the compost underneath is fresh and has not formed a crusty salt layer, replace if necessary. Top up the bark layer with fresh bark to maintain an insulating layer.

To maintain plant protection we recommend regular replenishment of the bark layer.

Plant Protection Bark

Natural slug barrier

Holds moisture around plant

Suppresses weed growth

Decorative mulch for borders & containers

Perfect for use in borders and containers

Westland Plant Protection Bark is a unique 3 in 1 mulch which has been specially manufactured to protect your plants from slugs, drought and weed establishment.

The attractive decorative mini bark chips create a physical barrier preventing slug and snail damage. The natural way to protect those precious plants.

Bark Coverage

When spread to an average depth of 3cm:

1 bag of Plant Protection Bark will cover 2 sq.m
