8.2 Exposure controls

8.2.1 Appropriate engineering controls: Containment and/or segregation is the most reliable technical protection measure if exposure cannot be eliminated.

The extent of these protection measures depends on the actual risks in use. If airborne mists or vapours are generated, use local exhaust ventilation controls.

Assess exposure and use any additional measures to keep airborne levels below any relevant exposure limit.

Where necessary, seek additional occupational hygiene advice.

8.2.2 Personal protective equipment:

Eye / Face protection:

Safety glasses/goggles should be used if a risk assessment indicates it is necessary to avoid splashes, mists or gases
Follow any site specific eye protection policies

Skin protection:

Hand protection: Chemical resistant, impervious gloves should be used if a risk assessment indicates it is necessary

Gloves should be discarded and replaced if there is any indication of degradation or chemical breakthrough

Suitable material: PVC, Nitrile rubber

Body protection: Assess the exposure and select chemical resistant clothing based on the potential for contact and permeation/penetration characteristics of the clothing material

Other skin protection measures: Wash with soap and water after removing protective clothing

Decontaminate clothing before re-use, or use disposable equipment (suits, aprons, sleeves, boots, etc)

Ensure that eyewash stations and safety showers are close to the workstation
